Javad Dehban

Android Developer

" For the six years that I have been working professionally in the mobile programming field, I have done several projects during these years, all of which I mentioned above.
After working in this field for a long time and gaining much experience in small and large projects, I decided to participate in large-scale and widespread projects.
So, with my knowledge and experiences, I could add new things to the team and learn new things in return.
I am very interested in coding and new technologies; also, I can adapt to new technologies to the extent that I spend daily time studying technology content. "
